Open architecture access to FISCAL's P2P risk intelligence

The problem.

Most P2P platforms ask you to adopt their AI, in their interface, on their terms. But that multiplies governance reviews, while fragmenting and under-utilising your tool stack, including your existing AI investment.

The challenge is reaching the specialist data and intelligence locked inside those business applications without commissioning bespoke integrations, forking your AI strategy across disparate systems, or adding compliance exposure to your stack.

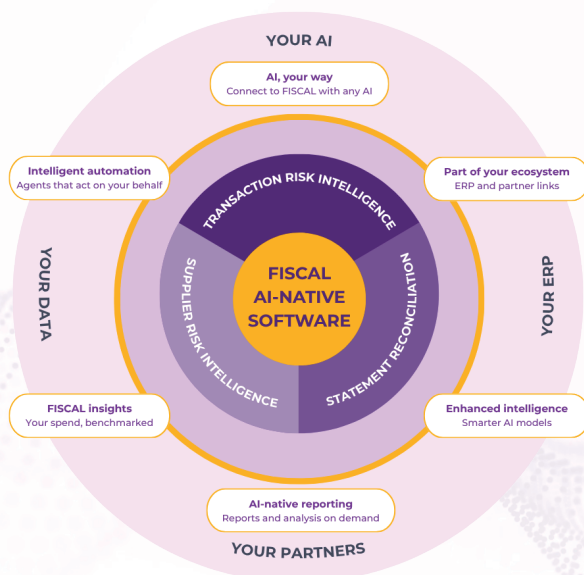

The solution.

FISCAL's platform features an open architecture layer built on the **Model Context Protocol (MCP)**. Using this, any AI environment can call FISCAL's P2P data and processes directly. We've built our MCP with a system of intelligence - curated usable content and context information about our data - for trusted, repeatable outcomes. FISCAL becomes part of your existing ecosystem and can be incorporated into your team's workflows seamlessly.

It's our intelligence, on your terms. All governed by your policies, accessed by the AI your organisation has already approved.

Our solution is supported by our experts, who are always happy to answer your questions.

**SIMPLE AI
ACCESS TO
FISCAL'S
UNRIVALLED
P2P RISK
INTELLIGENCE.**

Benefits.

- 1 Access to two decades of specialist P2P data expertise, algorithms and risk intelligence.
2. Retain control of your data security and AI governance.
3. Flexibility to use FISCAL with AI workflows.
4. Real-time access to your transaction and supplier information.
5. Easy to implement and build into your own ecosystem.

Features.

- 1 Open architecture built on the MCP standard.
- 2 Compatible with AI environments including Copilot, Claude, ChatGPT, Gemini or internal LLMs.
- 3 Connects into ERP systems, Microsoft, and procurement platforms.
- 4 Enterprise-grade security and governance.
- 5 System of intelligence with curated context-derived data.
